

HP Twin Lift M-Flip

mobile lift system, display specific for Samsung Flip

Item no.: 8268

The HP Twin Lift M-Flip is a mobile, height adjustable lift system, display specific for Samsung WM55H, WM55R and WM55B.

The Samsung Flip can be rotated von landscape to portrait format and vice versa, if desired. Thanks to the included spring mechanism the format change is possible with little effort. The screen locks in the desired end position and can be - without unlocking - released from the end position.

The system is motorized and the height can be adjusted by a wired remote control. The start and end point can be programmed and thus adjusted to the individual needs. The lift system also has collision prevention, which stops the screen from moving as soon as resistance occurs.

Thanks to the asymmetrically shaped base with castors, it is possible to position the system close to a wall. The floor space required is W 1202 x D 794 mm.

The high quality castors ensure that the entire system can be moved easily. The integrated lock-type brakes make it easy and safe to fix it at the desired place.

The HP Twin Lift M-Flip features an integrated, lockable media cabinet. AV equipment stored there can be mounted on the removable AV mounting plate, keeping it secure and protected from unauthorized access.

Cable management is neatly organized via a cable drag chain (IGUS).

The max. load is 45 kg.

Cable management by cable drag chain (IGUS)

Release from the end position without unlocking
