Remarks and observations

The following conditions are applicable:

The LEA VACIE is compliant to the EN 54-16:2008 when the equipment is installed in one or more standard 19-inch rack(s) to the following specification:

1. Lockable front door (to provide access level 2)
2. Multiple cabinets must be connected together using cabling types and topology approved by the relevant voice alarm code of practice
3. The rack must be protected to IP30 as specified in EN 60529:1991+A1:2000 The rack cabinet must be of heavy-duty construction with a fully welded rack frame.
4. The cabinet must comply with mechanical dimensions as specified in EN 60297-3-100

Presence of the AMX NX3200 (which is non-VACIE equipment) within the rack during testing showed that it does not harm the operation of the VACIE and therefore it can be used for non-emergency functions.
